Coding Assignment: Dog Viewer (1 hour)

In this assignment, you will create a simple app that displays images of various breeds of dogs.

The data for dog breeds can be taken from the Dog API: https://dog.ceo/dog-api/documentation.

Please develop the app in a public repo such as on github.com, and have the app be easily runnable by the reviewers.

Please don't feel like you need to complete all the parts of the exercise, but just stay within the timeboxed duration. In subsequent interviews, we might ask you to add more functionalities to this app. So, please keep that in mind as you develop this app. Thank you!

Part 1: General display

The app should display a random dog image on the top, labeled by its breed. Below that, the app should show the thumbnails and breeds of 10 random dogs.

When the user clicks on a thumbnail, that image should be shown as the main image.

When the user hovers over a thumbnail, the image should smoothly increase slightly.

Part 2: Favorites

Add a favorites list on the right side of the app. The user now should be able to use a "favorites" button to add the main dog image to their favorites.

When clicking on an item in the favorites list, that image and breed name should be shown as the main image.

There should be a button next to each favorited item for removing it from the favorites list.
